## SUMMARY

Pre-final year B.Tech CSE (AI & ML) student (CGPA: 9.22) with experience in full-stack web development and machine learning fundamentals. Strong foundation in Python, SQL, JavaScript, and DSA with 100+ LeetCode problems solved.

## EDUCATION

|                                                                                                  |                                |
|--------------------------------------------------------------------------------------------------|--------------------------------|
| <b>B.Tech – Computer Science &amp; Engineering (AI &amp; ML)</b><br>VIT Bhopal University, India | Expected 2027<br>CGPA: 9.22/10 |
| <b>Class XII – CBSE</b><br>Pratap World School, Himachal Pradesh                                 | 2022<br>94.6%                  |

## TECHNICAL SKILLS

**Languages:** Python, JavaScript, C++, SQL  
**Web:** React, Node.js, Express, HTML, CSS, REST APIs  
**Data & ML:** EDA, Data Cleaning, Regression, Classification  
**Databases:** MySQL, MongoDB, AWS DynamoDB  
**Tools:** Pandas, NumPy, Matplotlib, Git, GitHub, Jupyter, Excel  
**Core CS:** DSA, OOP, DBMS, OS

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                     |                          |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|
| <b>UIDAI Data Hackathon – Aadhaar Service Stress Dashboard</b><br>• Analyzed Aadhaar service datasets using statistical methods and Z-score analysis.<br>• Built Python pipelines for data cleaning, aggregation, and visualization.                                                                                                                                | 2026                     |
| <b>Pet Adoption Platform – Full Stack MERN</b><br>• Developed RESTful backend APIs using Node.js, Express, and MongoDB.<br>• Supported frontend-backend integration and deployed services on Render.                                                                                                                                                                | 2025                     |
| <b>Cloud Collab – AWS-Based Chat &amp; Collaboration Platform )</b><br>• Worked on a cloud-based collaboration platform with real-time chat, meetings, and live code sharing.<br>• Integrated backend services using Node.js and Express with AWS DynamoDB via the AWS SDK.<br>• Gained hands-on experience with AWS services and cloud-native backend development. | 2025<br>2026–<br>Present |
| <b>Krishi Deep – AI-Based Agricultural Analysis System (Ongoing, Group)</b><br>• Developed an ML-based backend pipeline for agricultural data analysis and prediction.<br>• Performed data preprocessing, feature engineering, and model training using Python.                                                                                                     |                          |

## EXPERIENCE

---

**MERN Stack Intern — Ethnus (Remote)**

2024

- Worked on guided full-stack development tasks using the MERN stack.
- Assisted in building REST APIs and backend business logic.

---

**CERTIFICATIONS**

Google IT Support Professional Certificate — Google

MERN Full Stack Developer — Ethnus

Azure Data Fundamentals — Microsoft

Solved 100+ DSA problems on LeetCode
